

# Asthma Study

## Recruiting Volunteers for Research Study

Researchers at Children's Mercy are studying how allergy medicine works in children with asthma. We want to learn if we can predict how well an allergy medicine will work for children with asthma.

### Who can be in this study:

- Children ages 6-17 years
- Diagnosed with asthma that has been uncontrolled
- African-American or Caucasian

### How long is the study and what happens?

The study lasts about 4 months. During the study, your child will have blood draws, allergy testing, breathing tests, and a histamine test on the arm. Parents and children will fill out surveys.

*Participants will be compensated for their time. Research is always voluntary.*
