

Remote Home Monitoring Feeding Tube Study Using the CHAMP® App

Have you talked with your healthcare team about transitioning your child from their feeding tube?

If so, your child may qualify for a study about shifting from tube feeds to eating by mouth, during which you will use an application called the CHAMP® App.

Taking part in a research study is always optional. If you and your child, choose to participate:

- You will enter feeding info, weight, and possible feeding videos from home.
- This data, in addition to your child's in-person or telemedicine appointments, will assist the Interdisciplinary Feeding team in evaluating your child's progress.
- There will be a one-time survey through a REDCap link to complete as part of the study.

Interdisciplinary Feeding Team

We will partner with feeding experts from the IDC team, such as Dr. Edwards, Dr. Bakula, Kristina Nash NP, and Rachel Graham RN.
