

MyCare App Study

Are you or your child a Children's Mercy Patient and interested in testing out a NEW app for diabetes?

About the MyCare App

- Easily manage your child's diabetes care
- Enter your blood glucose to help guide on when and how to dose for insulin
- Reminders to take insulin, check blood glucose or ketones
- Adjust your goals and earn points
- Access to diabetes education
- Information on transitioning to adult care
- Create a personalized diabetes plan to share with teachers, family, babysitters, etc.
- Find other research opportunities

About the Study

- Parents of children with diabetes or children with diabetes that are at least 13 years old can use the app.
- You or your child will review the app and take a few surveys during the study.
- The study team will be available to answer any questions.
- The study is testing app usability; participants' lifestyle or behaviors are not being tested.

If you are interested in completing a screening survey for the study, use the QR code or survey link below. Once you have completed the screening and you are eligible, you will receive a participation code via email to access the MyCare app.
