

What exactly does that mean for me?

You are invited to participate in a research study of the safety and effects of DFMO and its effect on insulin production in persons newly diagnosed with type 1 diabetes. You were selected as a possible participant because you were diagnosed with type 1 diabetes in the past 100 days.

By asking you to take DFMO or a placebo, we hope to learn whether DFMO may be a useful treatment to improve beta cell health for persons with type 1 diabetes.

Participants in this study will receive:

- a continuous glucose monitor (CGM)
- 12 months of expert diabetes management by our team
- financial compensation

CAN
A PILL
MAKE IT
EASIER TO
MANAGE
MY TYPE 1
DIABETES?

Indiana University is studying a drug known as difluoromethylornithine (DFMO) that may reduce stress in cells that make insulin and preserve your body's own insulin production.

What is the study about?

The purpose of this study is to determine if an investigational drug known as **DFMO** reduces the amount of stress on cells that make insulin and preserve your insulin production.

BETA CELL

DFMO

NATURAL INSULIN PRESERVED

WHAT WILL HAPPEN DURING THE STUDY?

Your participation in this study will be approximately 12 months. You will have 6 in person visits and 1 phone visit.

Visit 1 (Screen):

2 HOUR VISIT

\$50 compensation

Visit 2:

4-5 HOUR VISIT

\$100 compensation
Start Pill Regimen

Visit 3 (Phone Check-in):

15-20 MINUTE CALL

\$25 compensation

Visit 4:

4-5 HOUR VISIT

\$100 compensation

Visit 5:

4-5 HOUR VISIT

End Pill Regimen
\$100 compensation

Visit 6:

4-5 HOUR VISIT

\$100 compensation

Visit 7:

4-5 HOUR VISIT

\$100 compensation
